

Short Project Presentation

 moodle.cs.usask.ca/mod/assign/view.php

Provide a short (5 slide) presentation to the class on Friday outlining the project you expect to be undertaking. You should have formed your project teams of 2 +/- 1 individuals and agreed on generally what you will be doing and how you will be going about it. Your presentation should take 5-10 minutes and include the following slides

1. Team and background: who is part of your project team and what is their background/expertise?
2. Project goal and motivation: what question are you going to pose to the data and why is that question interesting?
3. General approach: what are the high level operationalizations you will need to encode to answer that question
4. General validation approach: how will you know how well you have answered the question?
5. Timelines for completion: What steps do you need to take before the end of the semester to complete the project?
